

Paneles triangulares

La forma triangular de este panel es el resultado de una intuicion brillante en su simplicidad y de facil aplicacion Los modulos rectangulares con unas medidas estandar son dificiles de integrar en los techos triangulares como tienen gran cantidad de casas y chalets, la forma triangular de nuestros paneles proporciona una gama de soluciones mas amplia impulsando las instalaciones fotovoltaicas en terminos de resultado estetico y capacidad instalada..

La calidad y la forma y el estilo de estos paneles se ve en los nuevos paneles de 60 celulas. la solucion ideal para obtener un panel estandar con una buena combinacion de calidad y precio.

T TRI-XXXBC-BB

Un sistema completo *A complete system*

La posibilidad de combinar libremente modulos rectangulares y triangulares da como resultado una disposicion practica e ideal de los modulos fotovoltaicos. Estos modulos pueden cubrir areas mas grandes (hasta el techo triangular completo) lo que resulta en una mayor capacidad instalada. La combinacion rectangular + triangular es la solucion mas eficiente. Pero los beneficios no son solo estos: Diseño, tecnologia, calidad, y capacidad instalada son realmente compatibles con esta instalacion extremadamente practica (que utiliza las mismas conexiones que los paneles solares clasico) que funcionan incluso cuando se conectan formas diferentes de modulos. En los sistemas fotovoltaicos mixtos los modulos rectangulares se convinan perfectamente con los modulos triangulares de potencia media.

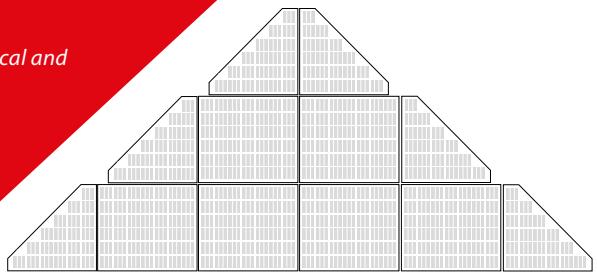

The chance to freely combine rectangular and triangular modules results in a practical and ideal arrangement of PV panels. These modules are able to cover larger areas (up to the entire triangular roof) resulting to higher installed capacity. The combination rectangle + triangle is the most efficient solution. But the benefits are not just these: design, technology, quality and installed power are indeed supported by this extremely practical installation (using the same connections as classic PV panels) that work even when different shapes of PV modules are connected together. In mixed PV systems rectangular modules are perfectly matched with half-power triangular modules.

In resumen :

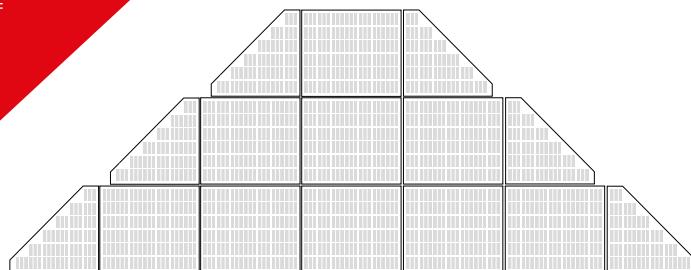

2 x triangulares conectados en serie =

1 x rectangular.

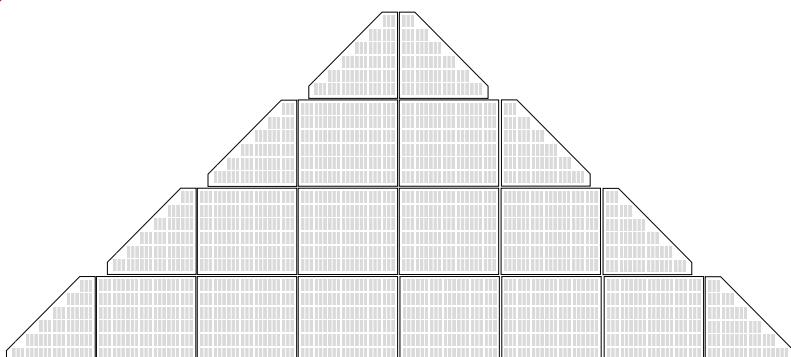

de esta forma se realiza una secuencia mixta sin la necesidad de dispositivos de cableado no estandar.

› Potenza totale: 1,98kW
› Total power: 1,98kW

› Potenza totale: 2,64kW
› Total power: 2,64kW

› Potenza totale: 3,52kW
› Total power: 3,52kW

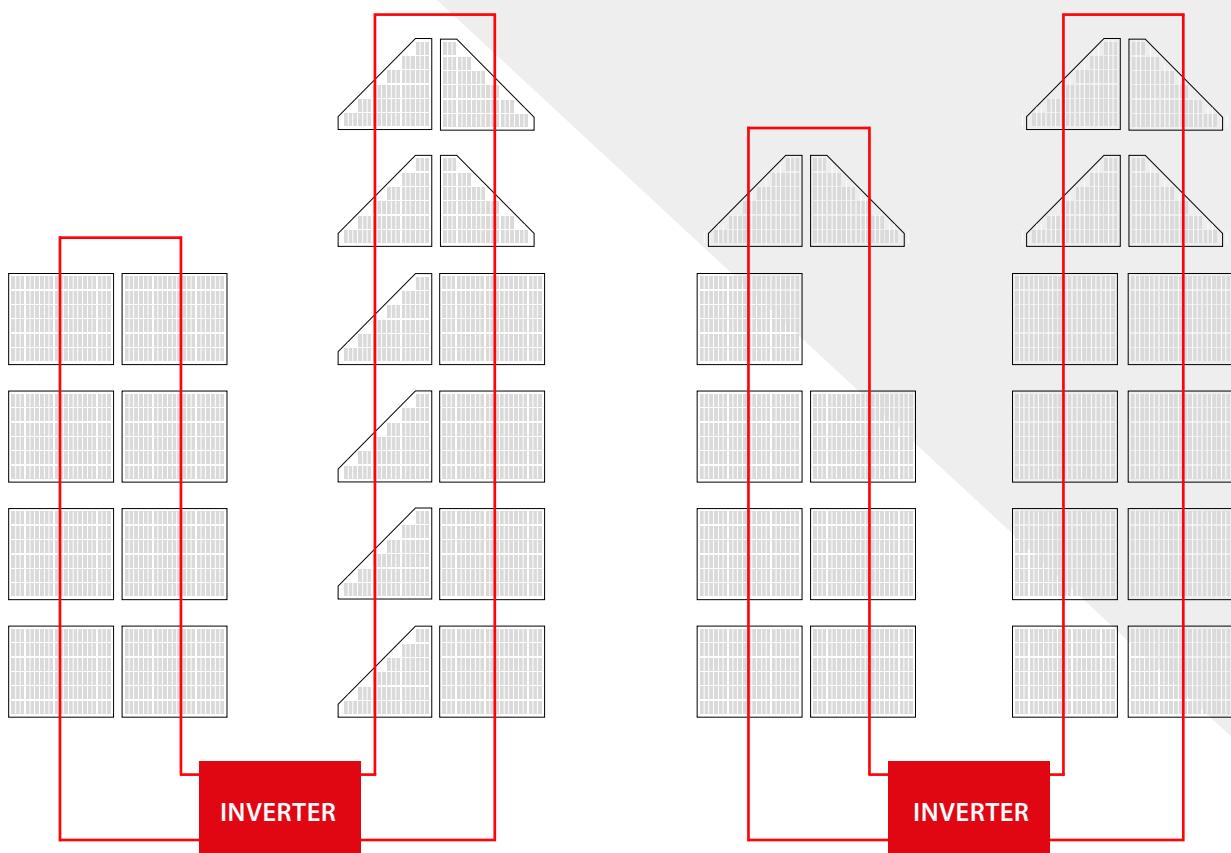

En todos los sistemas fotovoltaicos (Rectangulares y triangulares) los modulos rectangulares (Con una potencia de, suponiendo 220Wp) siempre deben coincidir con los modulos triangulares de mediana potencia (110 Wp) de esta forma es posible hacer instalaciones mixtas sin dispositivos de cableado particulares.

- > En cuanto a la potencia del inversor se recomienda siempre usar los datos tecnicos del modulo triangular y considerar cada modulo rectangular como dos triangulares

In all mixed PV systems (rectangular and triangular) rectangular modules (with a power of for example 220 Wp) must always be matched with half-power triangular modules (110 Wp).

This way it is possible to realize mixed strings without particular cabling devices.

As to converter sizing, it is recommended to always enter triangular module technical data by using a manufacturer software, and to consider each rectangular module like two triangular ones.

› String 1:
n.8 rectangular 1,76 kWp
Imp: 9,44 A
